Manager’s Report by Mike Langley

--------------------------

Financial Report by Celeste Lilley

Water Reclamation Facility

- The Facility Plan is still awaiting Department of Ecology review and approval.
- The new bypass screen for the headworks assembly has been constructed and is in place.
- The damage to the old lagoon liner has been repaired and an adjusted payment will be made to the excavator we hired to remove the vegetation. District personnel have been applying round-up to keep the vegetation at bay.
- SWD personnel are continuing to mow the spray field at the Water Reclamation Facility. This has been done five times so far this year. The department of Ecology is aware of this temporary change in operation.
- Communication with the Department of Ecology regarding the lagoon rehabilitation project continues as we prepare to complete that work in 2013.

Meter Setters

- The meter setter program has been temporarily deferred due to Scott’s injury.

Consumption Meters

- Readings from our water meters on occupied single family residential lots in SunLand are averaging 427 gallons per connection per day, compared to an annual consumption of 204.
The SG&CC facility has averaged **1374** gallons per day over the last 30 days, compared to an annual average daily consumption of **1014** gallons.

**Outreach/Funding/Partnerships**

- SWD has received an approved loan contract from the Public Works Trust Fund.
- The results of the lead and copper tests conducted at SunLand last month were all negative, indicating that there are no measurable amounts of these elements in any of the SunLand homes tested.
- SWD backflow Prevention Assemblies have all been inspected, tested, and approved. The district has two of these units at the reclamation facility and one at the lower reservoir.
- District staff have made one major repair to the water distribution system on Clallam Bay Street as well as one minor repair on Sunland Drive.
