

SUNLAND WATER DISTRICT

Commissioners Meeting

December 2018

Manager's Report by Mike Langley

~~~~~  
~~~~~

Financial Report by Karen Shay

Water Reclamation Facility

- The cat walk for the floc tanks is finished.
- Continue to watch for a new sign in front of the SunLand Water Reclamation Facility.
- Rich is studying for a professional certification exam. This step will move Rich into a cross-trained/certified capacity so that he can operate both in the water end and the wastewater end of what we do at the District.
- The last sewer connection for Division 17 East has been completed.

Water Meters/Meter Setters

- Scott has just completed the 10th water meter read for all of SunLand. The District is continuing to iron out the wrinkles in this process. The next water meter read is planned for the first week in January.

Water Production/Consumption Results

- Static water levels in the groundwater wells are normal for winter.

- Total water production this year from both sources through November is 77,300,047. Last year's total production for the year was just less than 84 million gallons.

Other

- Mike Langley participated in a WASWD workshop about the removal of Pharmaceuticals and Personal Care Products (PPCP's) from the wastewater stream. This workshop will be followed up by another event in February of 2019 to include representatives from the Washington State Department of Ecology. The SunLand Water Reclamation Facility may meet the requirements for financial assistance through the Department of Ecology for any operational modifications if the District chooses to incorporate this additional level of treatment.
- Scott and Mike responded to a high pressure alarm at the upper reservoir on Thanksgiving evening. We checked out all systems at both wells and found no faults.
- We are still awaiting further instructions from the Department of Health regarding lead and copper testing.
- Scott and Mike gave Division 7 an overview of what needs to be done for their division to be in compliance with Washington State WAC's and the Cross Connection Control regulations. They may have irrigation systems which do not currently have Backflow Protection Assemblies (BPA's), which do not conform to regulations or have not been tested as required. This education and implementation process for BPA's will be expanded throughout SunLand over the next couple of years.
- SWD personnel are continuing work on improvements to the water shop and barn.

- The lost isolation valve boxes at Southern View Estates have been found and marked so we can find them as needed. Thanks to the SVE community for their assistance in this action.
